Looks suspicious? Find the evidence.

Your first steps in cybersecurity, right in your browser.

Illustrative characters and screen. See a real exercise screenshot below.

Learn, even when you're offline.

One HTML file per tool

No extra tools / No installation

Save each tool's HTML file first, then open it locally. Practice searching logs, reading network traffic, and investigating and reporting through realistic workflows, using simulated data you can revisit.

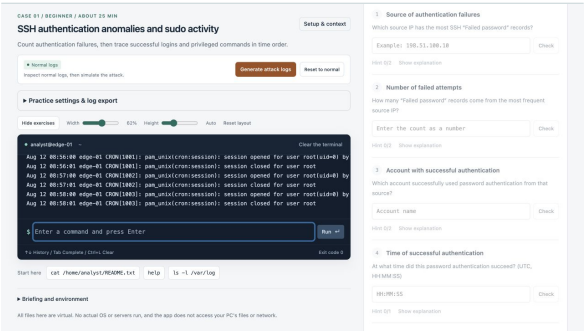

A good place to start if you...

- want to start learning cybersecurity
- have never worked with logs or commands
- want hands-on practice without a setup project

Get started in 3 steps.

1. **Download** Save the HTML while online
2. **Transfer** Move the file to your learning PC
3. **Open** Practice in a browser, offline

Actual exercise screen / Logroom

Start by finding a timestamp.

SOCroom-easy beginner | Free, no account needed

retiacole.github.io/socroom-easy/

Six rooms to read, investigate and explain.

Read logs (records of activity and communication), then learn to investigate and report with evidence.

Suggested learning order

1 SOCroom-easy (beginner) > 2 Linuxroom (beginner) > 3 SOCroom-easy (intermediate + advanced)

4 Logroom > 5 pcaproom-easy > 6 SOCroom > 7 ThreatHunting-room

No need to finish every exercise. Use hints, revisit earlier lessons, and go at your own pace.

1 + 3 Start reading logs

SOCroom-easy

Read times, accounts, and success or failure. Practice searches, checks, and short reports.

What you'll learn

Read the facts recorded in a log.

HTML to save / Download URL

https://retiacole.github.io/socroom-easy/socroom-easy.html

2 Command basics

Linuxroom

Open, find, and count files, one step at a time, using a simulated terminal.

What you'll learn

Extract information with commands.

HTML to save / Download URL

https://retiacole.github.io/linuxroom/linuxroom.html

4 Investigate logs

Logroom

Search, summarize, and cross-check simulated login, web, and other logs with commands.

What you'll learn

Explain events using multiple records.

HTML to save / Download URL

https://retiacole.github.io/logroom/logroom.html

5 Understand traffic

pcaproom-easy

Read packets (small units of network data) and follow traffic in a Wireshark-style view.

What you'll learn

Check where traffic goes and how it responds.

HTML to save / Download URL

https://retiacole.github.io/pcaproom-easy/pcaproom-easy.html

6 Investigate and report

SOCroom

Act as a security analyst. Combine logs, reference material, and staff inquiries.

What you'll learn

Support your conclusions with evidence.

HTML to save / Download URL

https://retiacole.github.io/socroom/socroom.html

7 Test a hypothesis

ThreatHunting-room

Start with a hypothesis about suspicious activity. Compare normal activity and contrary evidence.

What you'll learn

Summarize findings and plan the next hunt.

HTML to save / Download URL

https://retiacole.github.io/threathunting-room/threathunting-room.html

Saving a tool: Open its URL or QR link on your PC, then use your browser's Save As command (HTML only). Once saved, open the file in your browser to practice without an internet connection.

You need internet access to get the files or open QR links, and a browser that runs JavaScript for the exercises.
These are learning simulators. They do not reproduce a real operating system or professional tools exactly.
